Немногие люди могут сказать, что такое пескоструйная обработка или где можно воспользоваться этой полезной услугой в качественном исполнении. Данная обработка является уникальной технологией, в которой используются такие материалы как, песок или абразивный порошок (электрокорунд). Пескоструйная обработка - холодная абразивная обработка поверхности стекла путём её повреждения абразивом, распыляемым потоком воздуха высокого давления. Твердость и механическая прочность зерен электрокорунда обеспечивает точечную обработку поверхности, что гарантирует лучшую однородность рисунка и более длительный срок эксплуатации изделия, чем при использовании песка.

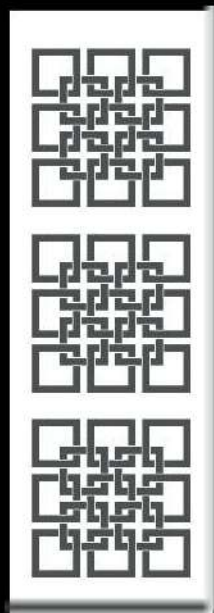

Возможные варианты обработки:

- *с лицевой стороны*
- *со стороны амальгамы зеркала*
- *комбинированные варианты*

Два способа нанесения рисунка:

- *рисунок матовый, фон зеркало/стекло*
- *рисунок зеркало/стекло, фон - матовый*
